

How to Access Cpanel Stats

Hi, part of your hosting package on the servers included stats programs. They are now password protected.

Go here, <http://www.yourdomain.com/cpanel>.

The userid is: (please email support@webacom.com for the required login)

Password is: (please email support@webacom.com for the required password)

Click on the icon on the right that says Web/FTP Stats. There you will find several programs that all track in slightly different ways. I believe you will find this system better and especially so no one else can view your stats. Please be careful in CPanel and just look at the stats only.
